

Safe search engines for children

Internet search skills are very important even for students at a younger age but the only problem is online safety. How can we guarantee the safety of our children while in the same time let them freely explore what the internet has to offer? There is a solution for this: childrens' safe search engines. These are search engines created specifically for children or people with special learning needs and safety issues in mind. These engines are different from the normal search engines we know of in that they are safer and more reliable.

If you are a parent or a teacher looking for search engines to recommend to your children and students, the links opposite will be a great start for you. We recommend choosing one of the safe search engines listed below, and setting it as the homepage on any computer your child uses.

Google Junior

<http://www.googlejunior.com>

Searchypants

<http://searchypants.com>

KidRex

<http://www.kidrex.org>

OneKey
